## PROFESSIONAL EXPERIENCE

### Petco

Full Stack Software Developer

San Diego, CA  
Apr 2021 - Present

- Designed and implemented a Project Management Tracker, integrating with external Construction Management System through 3rd party API, enabling construction stakeholders to actively manage and track changes to project timelines
- Extended functionality and revamped user interfaces within internal Real Estate GIS Mapping & Deal Tracking C#/.NET web application, more than doubling daily active users
- Automated financial reporting models and metrics built in Excel with Python, synthesizing with data from Snowflake Data Warehouse into MS SQL Server
- Centralized and homogenized Real Estate and Construction data in a Power BI dashboard, bringing increased visibility and accountability to critical KPIs
- Created REST APIs in C# to deliver consolidated financial metrics to be consumed by custom D3 visuals
- Optimized data architecture, SQL views and added application level caching improving page load times by over 90%
- Introduced an admin interface with an error logging dashboard, email notifications and a user permissions manager
- Created and maintained technical documentation of critical data structures and a data glossary for end users

### Siggi's Dairy

Senior Manager, FP&A

New York, NY  
Apr 2020 – Aug 2020

- Collaborated with intercompany partners and external consultants to ensure all system functional requirements were met as part of freight consolidation project leading to \$5MM+ in savings

Senior Financial Analyst

Jan 2018 – Mar 2019

- Drove and executed financial reporting integration efforts into Hyperion and TM1 following international acquisition
- Developed a fully automated Daily Sales Dashboard, increasing efficiency and enabling real-time analysis of business trends and KPIs

Financial Analyst

Aug 2016 – Dec 2017

- Managed monthly COGS analysis, inventory reconciliation & valuation with our 3PL provider and quarterly co-manufacturer audits that led to \$150K+ in rebates
  - Supported transition from Quickbooks to Microsoft NAV serving as the order-to-cash subject matter expert
- 

## PROJECTS

ProjectSocial - [FrontEnd](#) | [BackEnd](#) | [Website](#)

A social app connecting New Yorkers by enabling them to host and attend events at public parks in their local neighborhood. This is a Single-Page Application built with React/Redux, PostgreSQL and a RESTful Rails API.

- Utilized React Hooks and Redux for state management as well as React Router for Client-Side Routing
  - Normalized store shape to ensure a single-source of truth and increased application performance
  - Integrated parks' data from NYC's Open Data Portal with Google Maps API to plot all public parks and their activities
  - Leveraged WebSockets to ensure a real-time event news feed for seamless user communication and coordination
-
